

Hüttenes-Albertus: Innovating foundry chemistry across the globe

Hüttenes-Albertus Chemische Werke GmbH is a technology leader in the field of foundry chemistry. Its chemical solutions support foundries in nearly every step of the casting process. With over 100 years of history, the family-owned HA Group operates in more than 30 countries.

HA Group aims to be the most innovative company in the foundry industry, delivering superior customer value and serving as a preferred partner for foundries worldwide. To better align its business processes, it needed to upgrade its subsidiaries, including Hüttenes-Albertus Korea, to a more **scalable and cost-effective ERP solution**. It also sought expert support to help ensure the solution would meet the group's specific business needs.

Standardizing global operations with SAP S/4HANA Cloud Public Edition

Before: Challenges and opportunities

- Aligning subsidiary processes with global standards while meeting local requirements
- Ensuring data integrity and consistency across all business units and systems
- Lacking open item management and separation of subledgers from the general ledger, which led to inefficiencies in financial reporting and reconciliation
- Maintaining a legacy system that was expensive and not scalable

Why SAP

- SAP S/4HANA Cloud Public Edition implemented with a two-tier ERP strategy at the subsidiary level, starting with Korea, to enhance and modernize the existing ERP system
- SAP Services and Support, with a track record of successful implementations and comprehensive services, to minimize risk and tailor the solution to specific business needs

After: Value-driven results

- Improved operational efficiency and reduced errors in production orders through real-time data processing, enhanced integration across functions, and better visibility into operations
- Standardized processes and data management that increased overall financial performance
- Empowered the team to independently manage and leverage the full potential of the SAP solution, decreasing reliance on external support.
- Optimized management of bill-of-materials processes, improving accuracy that leads to less waste and enhanced version control that decreases revision time

“SAP S/4HANA Cloud Public Edition provided the **scalability and flexibility** needed to support our growing business needs and adapt to future changes.”

Stephan Lünskens, VP Global IT, Hüttenes-Albertus Chemische Werke GmbH
